

EloTouch - IDS (Interactive Digital Signage Displays)

Technologies:

IntelliTouch: This is a single touch technology based on Surface Acoustic Wave (SAW), very durable scratch-resistant glass surface that continues to work even if it is scratched. Widely used in kiosk, gaming, and office automation applications.

IntelliTouch Plus: This is also based on Surface Acoustic Wave (SAW) touch technology and has all of the durability benefits, however it is capable of two simultaneous touches. High traffic applications that require dual touch are good candidates for this technology.

Infrared: The survivor of harsh applications, the only technology that does not rely on an overlay or substrate to register a touch, so it's impossible to physically "wear out" the touchscreen. Combines superior optical performance with excellent gasket-sealing capabilities, so it's an excellent choice for harsh industrial and outdoor kiosk applications. Touched with a finger, gloved hand, fingernail or stylus, it delivers a fast, accurate response every time.

IntelliTouch Pro Projected Capacitive: (PCAP) offers a fast and sensitive response combined with a sleek stylish design, available in screen sizes up to 46 inches with 10 point multi-touch capabilities. This is a flat glass front surface similar to an iPad.
